Subject: Islands Trust 2050 Draft Policy feedback

Lots of good things in this draft policy proposal. Astonishingly, given the overriding theme of the reduction of GWG and policies that reduce automobile dependence, not a word on public transportation. Further, while there are statements in support of electric cars and ELECTRIC bicycles, not a word about regular bicycles, bike lanes, and bike infrastructure. Surely, in reducing the dependence on cars, reductions in ferry lineups, and climate change mitigation policy, public transportation and bicycle infrastructure needs to be embraced clearly as a guiding principle for the next 30 years
