Subject: Cell Phone Radio Frequency Radiation

To all addressed,

I am extremely concerned to hear that a private company is proposing to build a 35 meter (114 foot) tower that would "sell" space to all of the cell companies providing coverage on the island - Bell, Freedom Mobility, Telus and Rogers.

The proposed site is on private land at 131 Knott Place just off Rainbow Road which is the home of "Diggin' it Excavating". The owner of that property would likely receive monthly rent for leasing their land for this purpose. (The site is right behind Garden Faire and across from the pool.)

The proposed site is adjacent to Moat Park, within 550 metres of the pool, 700 meters from Gulf Island Secondary School and roughly 1000 meters from Salt Spring Elementary School with its Early Learning Program. (Attended by toddlers and preschool age children.)
I am attaching a study that shows the harmful affects on rats from cell tower exposure.

Thank you for your attention,
Sincerely,
Patricia Faurot,
