We understand that some changes have been made to this bylaw However we are very concerned that increasing density, especially in the North End will cause many problems We are residents here and know that over use of a well producing potable water will cause it to become unusable Further more if this well is not properly sealed it can cause further problems in the area !

The OCP states that the number of residents should be capped at 1700 and even that seems a stretch for our environment!

Should this bill be approved it is certain that extra accommodation should be affordable for our local workers and never be allowed to relapse into short term rentals Thank you for considering all options Ed and Jan Jang
