Subject: Discussion about revision of the LUB house size

Dear trustee Evans and Falck

As far I am concerned the house sizes set out in the current LUB are supporting the intent of our OCP. The house sizes reduce our ecological footprint both during the building process and afterwards, which helps to mitigate our current/ looming climate crisis.

Again, since you seemingly want to change the house sizes in the LUB, I am looking forward to see your rational for how it supports our OCP and climate change mitigations.

Respectfully
Christian Engelstoft
